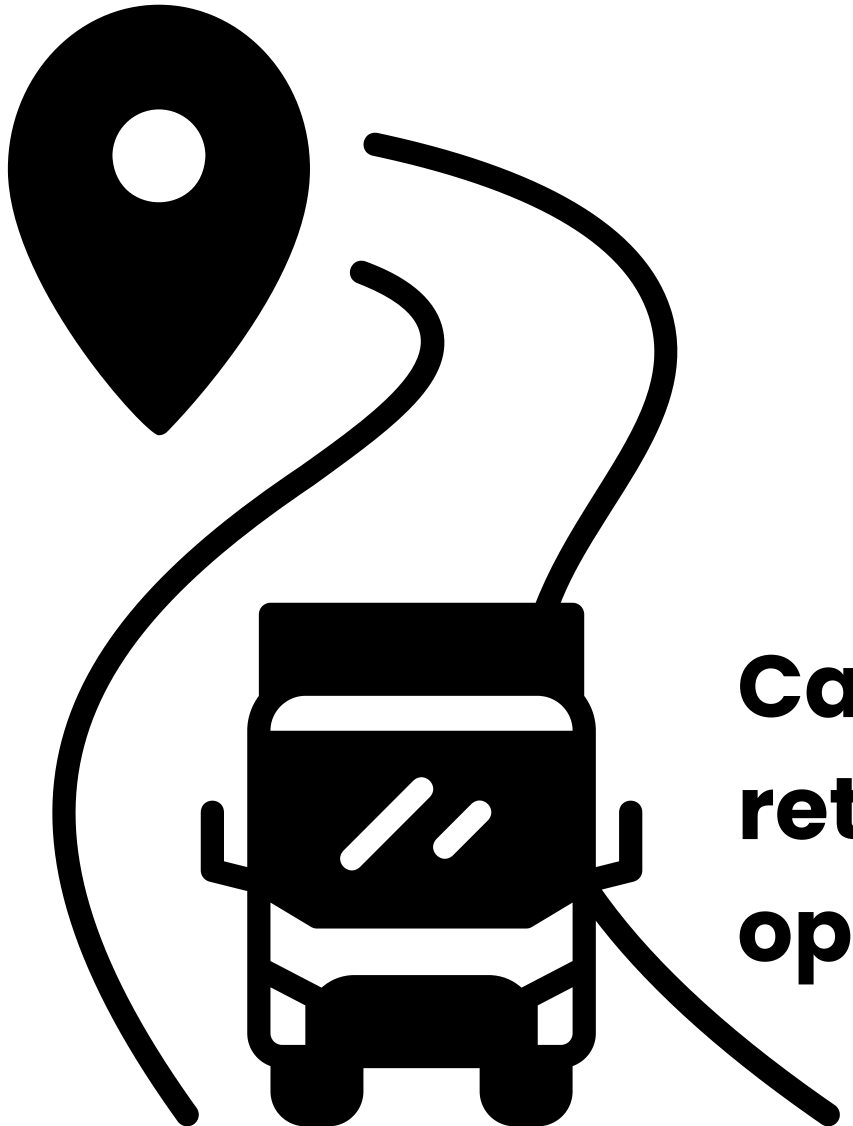
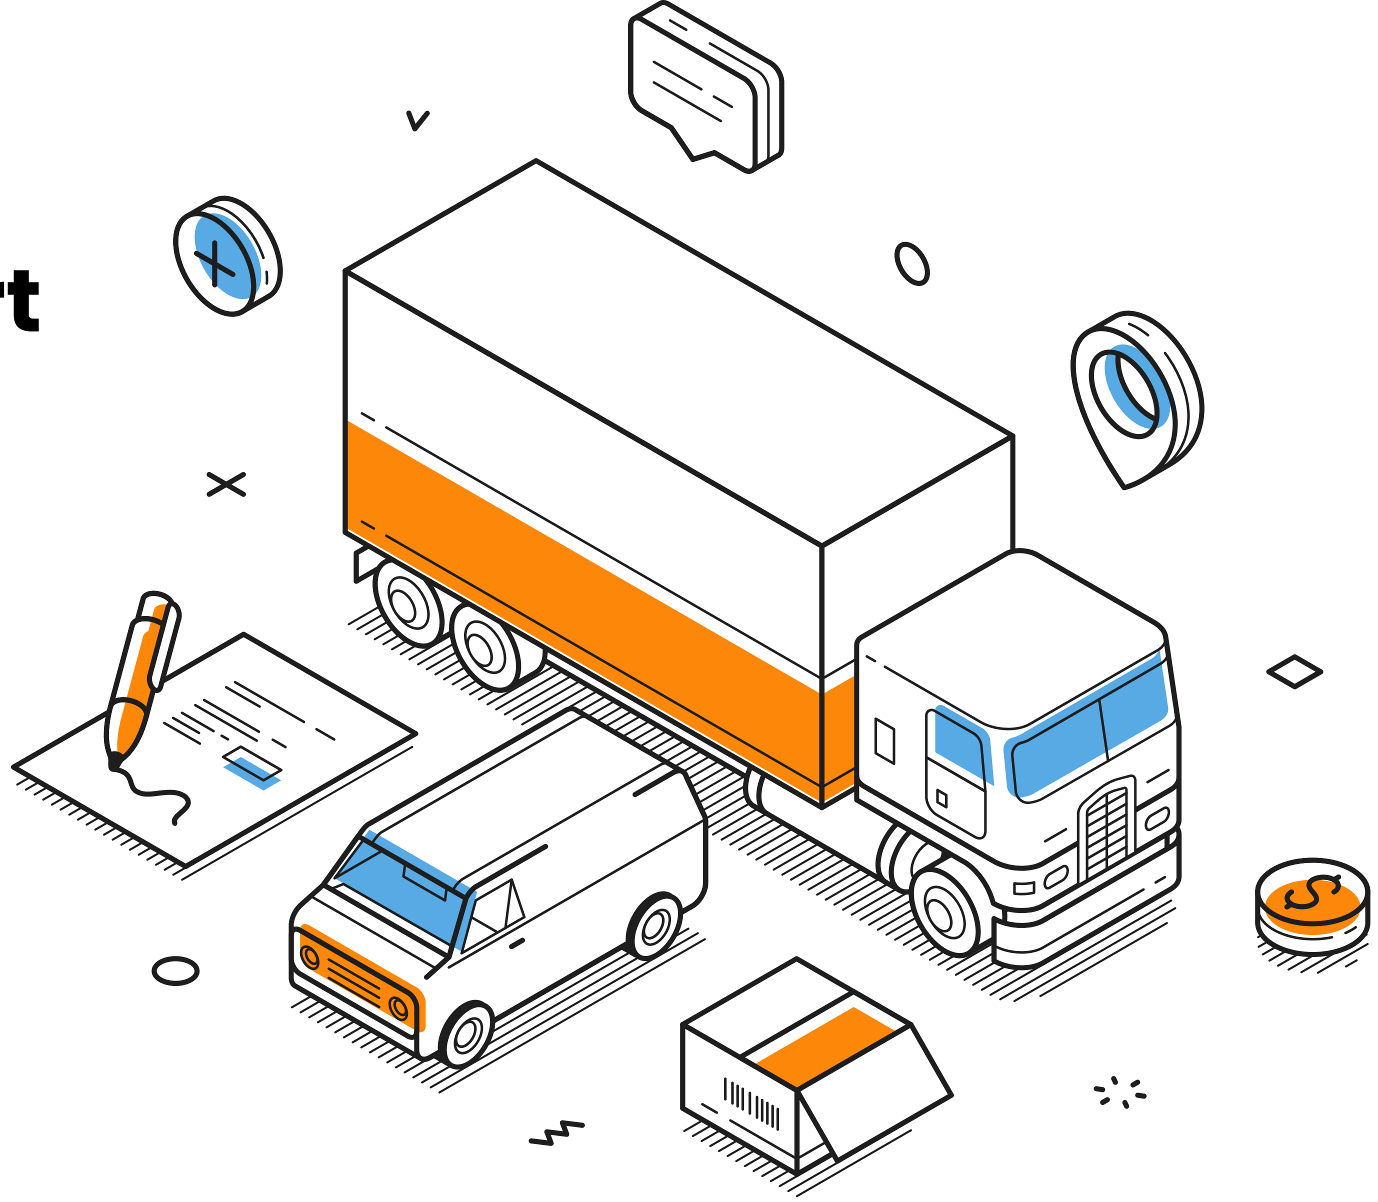
The Solution

We fill trucks that would drive home **empty**.



Carrier lists empty return route with open capacity

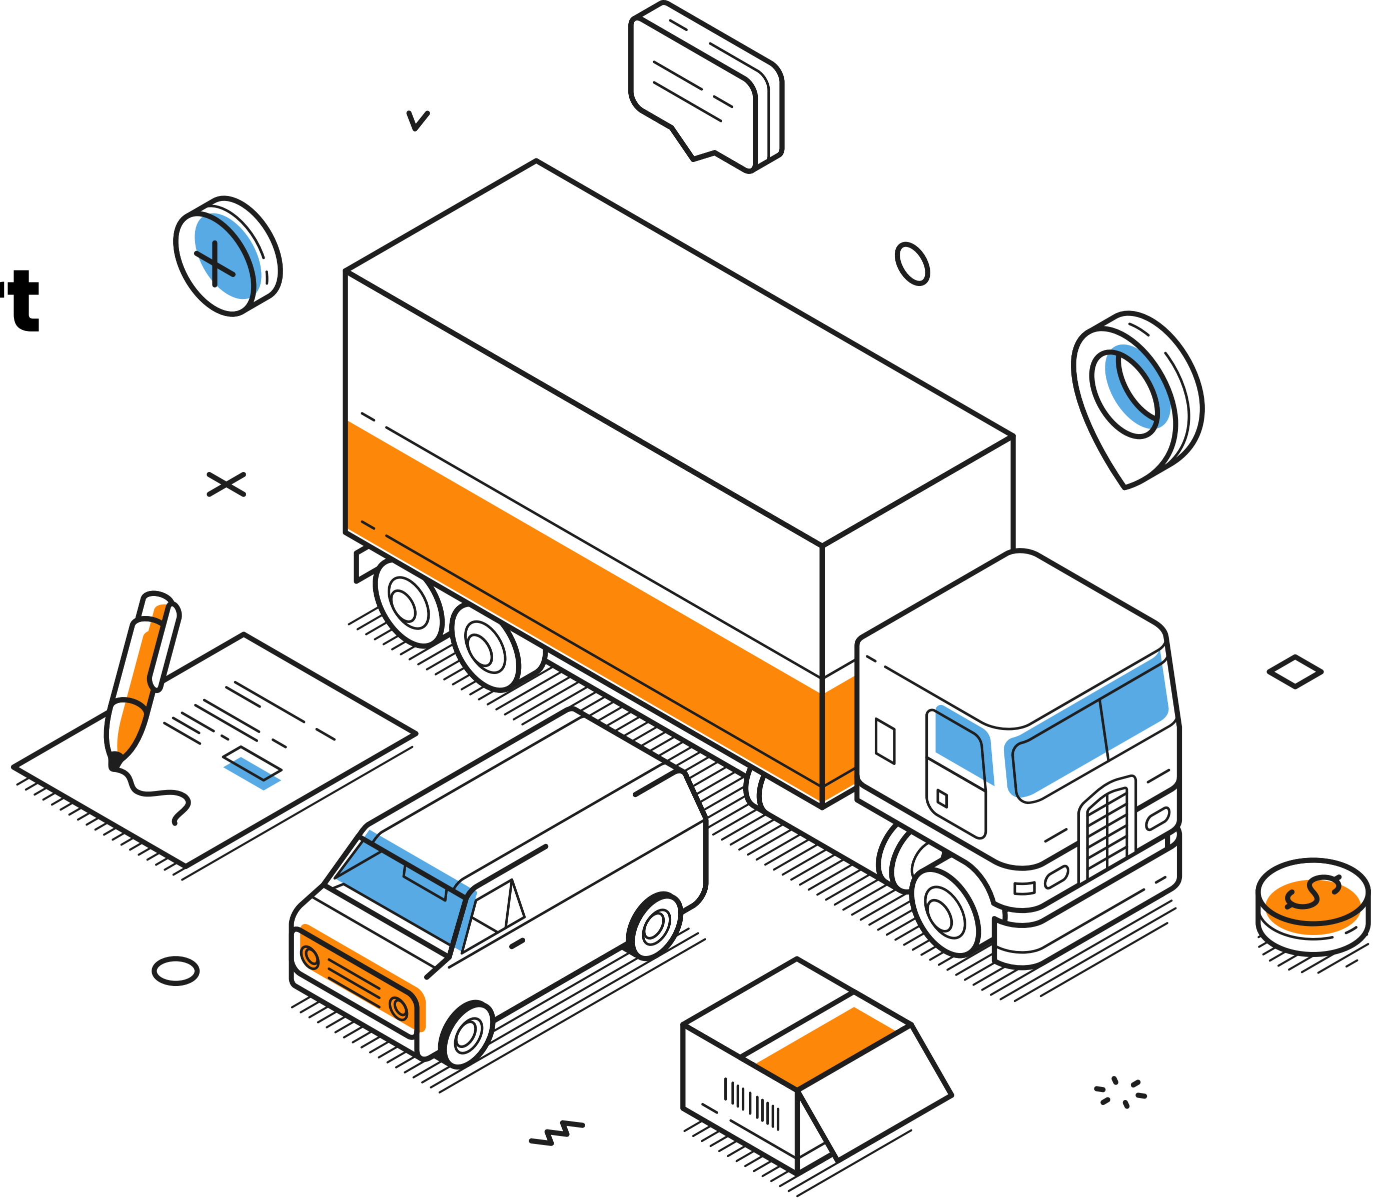
Shipper books part of all of the space at a lower rate



Carrier lists empty return route with open capacity

Carrier lists empty return route with open capacity

Shipper books part of all of the space at a lower rate



Both benefit: Carrier makes money, shipper gets a cheaper shipment

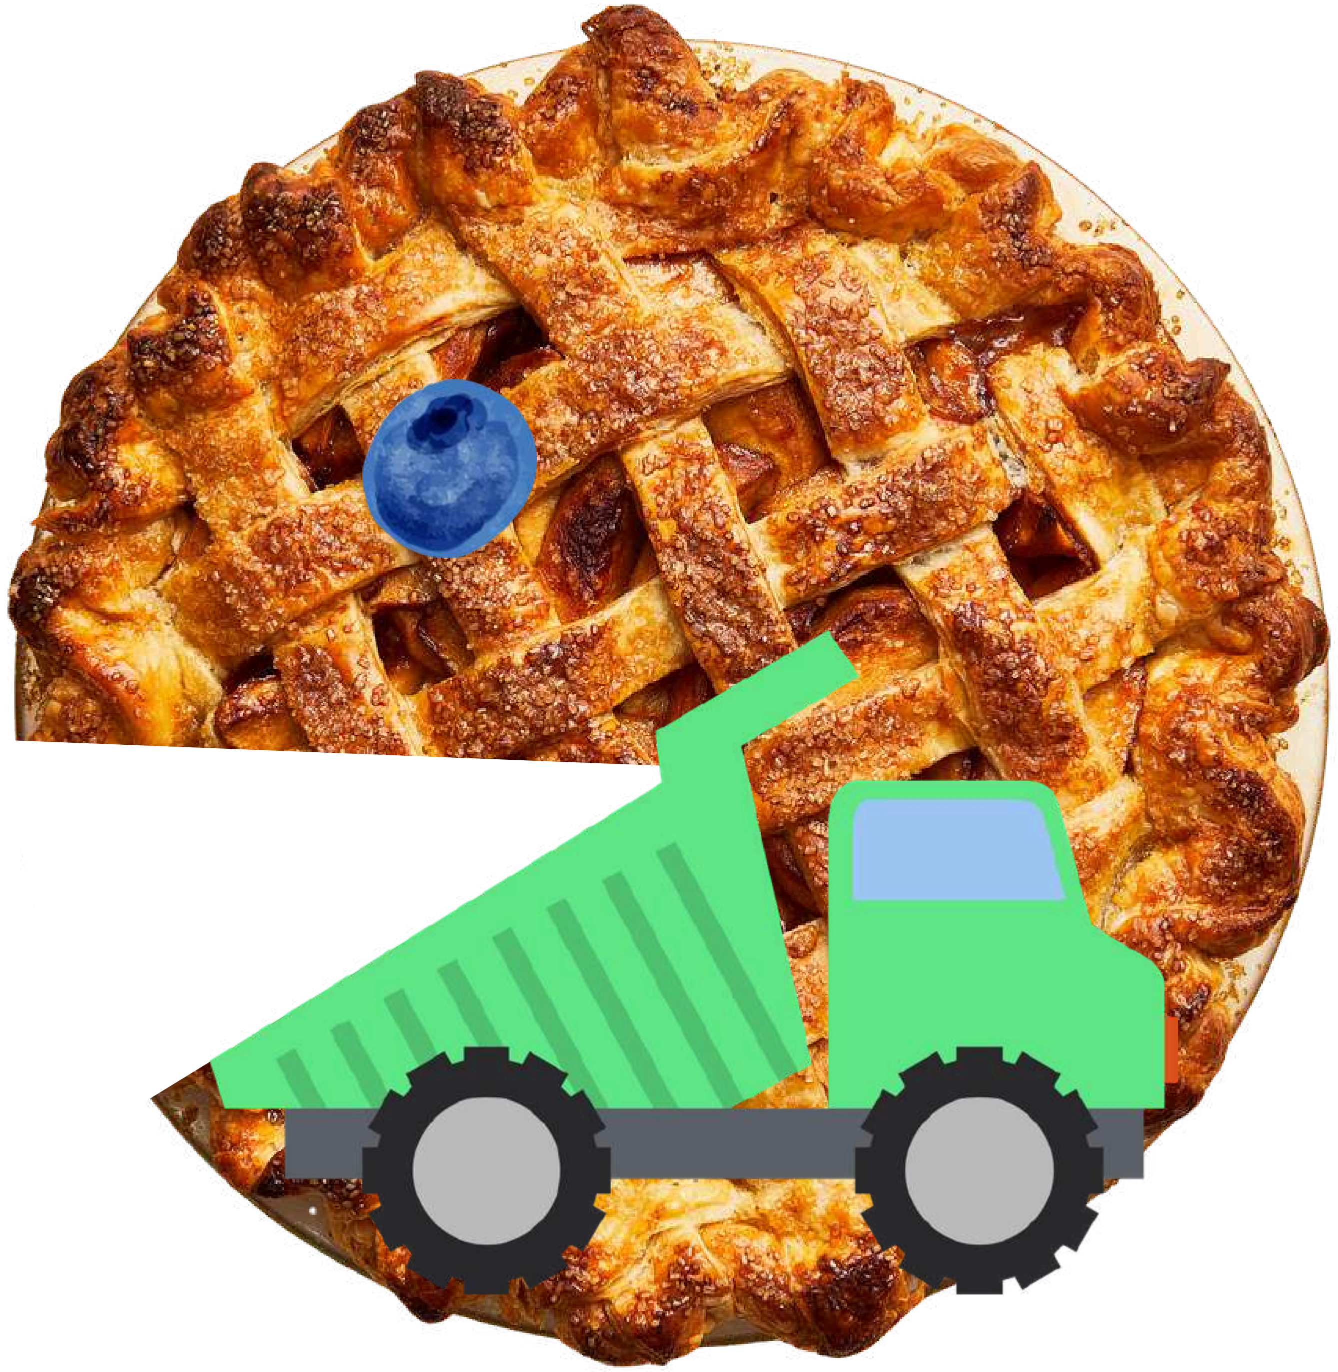
Total Addressable Market

Canadian trucking industry

$72B

SAM: less-than-truck-load + partial load segment: $8B

SAM: less-than-truck-load + partial load segment: $8B



SOM: Return-leg optimization opportunity: $900M

The Business Model

We **CUT** broker fees from **30% down to 15%**, putting more money in the pockets of **both** shippers and drivers.

We CUT broker fees from 30% down to 15%, putting more money in the pockets of both shippers and drivers.

We keep our business steady by combining these transaction fees with a monthly subscription for our fleet tracking tools.

THE COMPETITIVE MOAT & SCALE

We are focused on the high-value Canadian routes that US competitors ignore.

$500K buys us better AI to handle 400 trucking companies, hitting $5.7M in sales by Year 3

How do you beat established, traditional freight brokers?

We are fully asset-light and do not own the delivery trucks. This keeps overhead incredibly low, allowing us to charge a flat 15% commission and heavily undercut traditional broker margins

Once a driver and a shipper connect on your app, what stops them from cutting you out and doing business directly to save the 15% fee?

We provide value far beyond the initial introduction. Our platform handles automated dispatch, secure GPS tracking, and seamless payment processing. Furthermore, our Year 3 roadmap introduces advanced payment terms for trusted shippers. The administrative convenience and financial security we provide easily outweigh our commission.

If a new competitor launches tomorrow and only charges a 5% or 10% commission, how do you defend your 15% rate?

A platform charging 5% is useless if it doesn't have reliable trucks or available cargo. We are not competing in a race to the bottom on price; we are competing on network liquidity. By securing early market share and offering a superior, reliable matching experience, the 15% rate becomes an accepted industry standard for guaranteed execution.
